

J-TRAC HANGER SYSTEM, 5 LIGHT HANGERS

Colour: Hanger: Black Rail and end caps: White

The J-trac hanger system, 5 light hangers is one of two versions of our patented hanger system, offering a safe and functional solution for hanging clothes in care environments where safety is essential.

- The hanger is designed to prevent self-harm and suicide attempts and automatically detaches from the rail under abnormal load.
- The rail is robust and designed to minimise the risk of attaching cords, ropes, or similar items for suicide-preventive purposes.
- The hanger is durable, lightweight, and made from a strong material capable of withstanding daily handling and use.

The J-trac hanger system, 5 light hangers is particularly suitable for all environments with specific safety requirements, such as mental care, youth care and correctional facilities. The system can be mounted in the ceiling of a wardrobe or underneath a wall-mounted shelf. The system only works with the included hangers, which stops standard hangers or other items from being used. This reduces the risk of using products not adapted to safety environments in ways that could pose a danger—for instance, by breaking, being manipulated, or used for self-harm. Hanging clothes instead of folding them helps maintain order and makes it easier to get an overview of one's belongings. It also helps preserve the shape and condition of garments. For the user, this can provide a sense of structure and control in daily life, which is valuable in a care setting. The J-trac hanger system, 5 light hangers is delivered complete with 5 hangers, 1 rail, and 2 end caps. Patented design: Healsafe Interior Suitable for placement in patient rooms or communal areas.

PRODUCT DATA

Material

J-trac hanger, light: Polyurethane foam and TPU (thermoplastic polyurethane) Rail: Powder-coated aluminum End cap: Powder-coated aluminum

Technical data

HS-901 – J-trac hanger system, 5 light hangers (5 hangers, 1 rail and 2 end caps.) Hanger: W 420 mm, H 200 mm. Weight: 150g. Rail: W 560 mm (w end cap 580 mm). A hanger automatically detaches from the rail under a vertical load of approximately 3.9 kg. When five hangers are loaded simultaneously, they detach at a combined weight of around 13.6 kg. Tested by RISE, Sweden

Delivery

1 week. For special orders, the delivery time may vary. Please note that unforeseen events may affect delivery. For more information about the current delivery time at the time of order confirmation or prior to ordering, please contact us at info@healsafeinterior.com.

Maintenance

The rail and J-trac hanger light can be cleaned using alcohol-based or standard cleaning agents.

Sustainability

The J-trac hanger system, 5 light hangers has a very long service life. The hanger should be sorted as plastic. Rails and end stops should be sorted as metal.

Warranty

Rail and end stops: Lifetime warranty. Applies under normal use. J-trac light hanger: 2 year. Applies under normal use. Full warranty provided for manufacturing defects. For claims or complaints, please contact us at info@healsafeinterior.com.

Manufacturing/Production

Sweden.

Installation

Mount the rail and end stops using safety screws JT-283. The J-trac hanger system is suitable for wardrobes up to 600 mm wide, but can also be adapted for larger widths. For narrower wardrobes, the rail can easily be cut to the correct length using a hacksaw. Installation instructions are included with the order or can be provided upon request.
