BOARD WITH HOOKS STANDARD

Variants: Board with 2 hooks (310x90x60 mm), Board with 3 hooks (520x90x60 mm), Board with 4 hooks (730x90x60 mm), Board with 5 hooks (930x90x60 mm), Board with X hooks

Bathroom board with hooks is a durable and secure solution for hanging items in environments with high demands on both function and hygiene. The robust high-pressure laminate board is moisture-resistant, making the product particularly suitable for bathroom settings.

- **Equipped with Hook Standard, which releases under a vertical downward load exceeding 10 kg.**
- **Installed with security screws for stable and secure mounting.**
- **Robust construction with chamfered edges, high durability and a smooth surface that is easy to clean.**

Bathroom board with hooks is suitable for environments requiring safety and durability, such as healthcare facilities, residential units or other public spaces where a flexible and impact-resistant hook is needed. Suitable for installation in bathrooms, patient rooms or communal areas.

PRODUCT DATA

Material
Polyoxymethylene (POM)

Maintenance
The board and hooks can be cleaned using a soft cloth and mild liquid detergent. If necessary, it may be disinfected using alcohol-based disinfectants. Do not use abrasive cleaning chemicals or scouring pads.

Sustainability
Hook Standard has undergone extensive testing to ensure both function and durability. During vertical load tests using different types of cords – 1 mm plastic line, 8 × 1 mm shoelace and cotton sheet rope – the hook releases between 8.5 and 9.8 kg. Product testing was conducted by RISE/SP, where the hook demonstrated the ability to withstand over 1,000 releases without losing its shape, function or safety. The design and materials of the hooks and board have been chosen to ensure a long product lifespan. Hooks are sorted as hard plastic for recycling. The board is sorted as wood.

Delivery
1 week. Please note that unforeseen events may affect delivery. For current delivery times at the time of order confirmation or prior to placing an order, please contact us at info@healsafeinterior.com.

Warranty
5 years. Applies under normal use. Full warranty provided against manufacturing defects. For claims or complaints, please contact us at info@healsafeinterior.com.
Manufacturing/production Sweden.

More product information
The design combines several hooks on a shared board, minimising the number of drill holes and simplifying installation while maintaining the wall's integrity. The design also provides a uniform and tidy appearance in the room. Each rail is made from high-pressure laminate (HPL), a material that withstands moisture, wear and cleaning, making it particularly well suited for bathrooms and other wet areas. The board can be fitted with 2, 3, 4 or 5 Hook Standard, or custom-made in the desired length and number of hooks to meet specific needs. Hook Standard supports the weight of several garments or towels without being affected. When the load exceeds approximately 10 kg, it bends so that cords, straps or similar items slide off, after which the hook returns to its original shape and function. The chamfered edge of the hook rail is designed to further prevent anything from being fastened around it – cords or straps easily slide off, thereby reducing the risk of unauthorised use. The hooks are made of polyoxymethylene (POM) – a material with high strength, impact resistance and excellent resilience. Bathroom board with hooks is mounted on a flat wall surface to ensure a close fit, preventing cords or similar items from being attached between the wall and the hook. Please follow the installation instructions carefully. The hooks are available in three colours – white, black and grey – with white as standard. Please note that Bathroom board with hooks is not designed as a suicide-preventive product – for such requirements, Bathroom board with hooks Max5 or Bathroom board with hooks Max10 are recommended.

Design:

Healsafe Interiör

Installation
The board must be mounted on a completely flat surface to achieve a close and stable fit between the board and the wall. This minimises the space behind the board, thereby reducing the possibility of attaching cords, straps or similar objects that could be used for self-harm. The board shall be installed using security screws. Installation must be carried out in accordance with the installation instructions.
